LUMENAR

SIGNATURE METALS

Architectural Steel Perimeter Systems

Galvanized steel perimeter systems finished in architectural wood grain TEXTURE. Non-combustible and EXTREME low maintenance.

ALDERA
PICKET FENCE

Architectural Collection · also available in Senda solid white

Privacy or not.
You decide.

Flexible. One picket profile. Three or more ways the crew can install it.

Single-side

Pickets overlap on one face for full privacy. 7-11/16" wide, 7½" of coverage once lapped.

Alternating

Pickets alternate face to face across the rail. The run reads the same from your yard and from your neighbor´s.

Gate

The same profile assembles into a matching gate. Nothing separate to order.

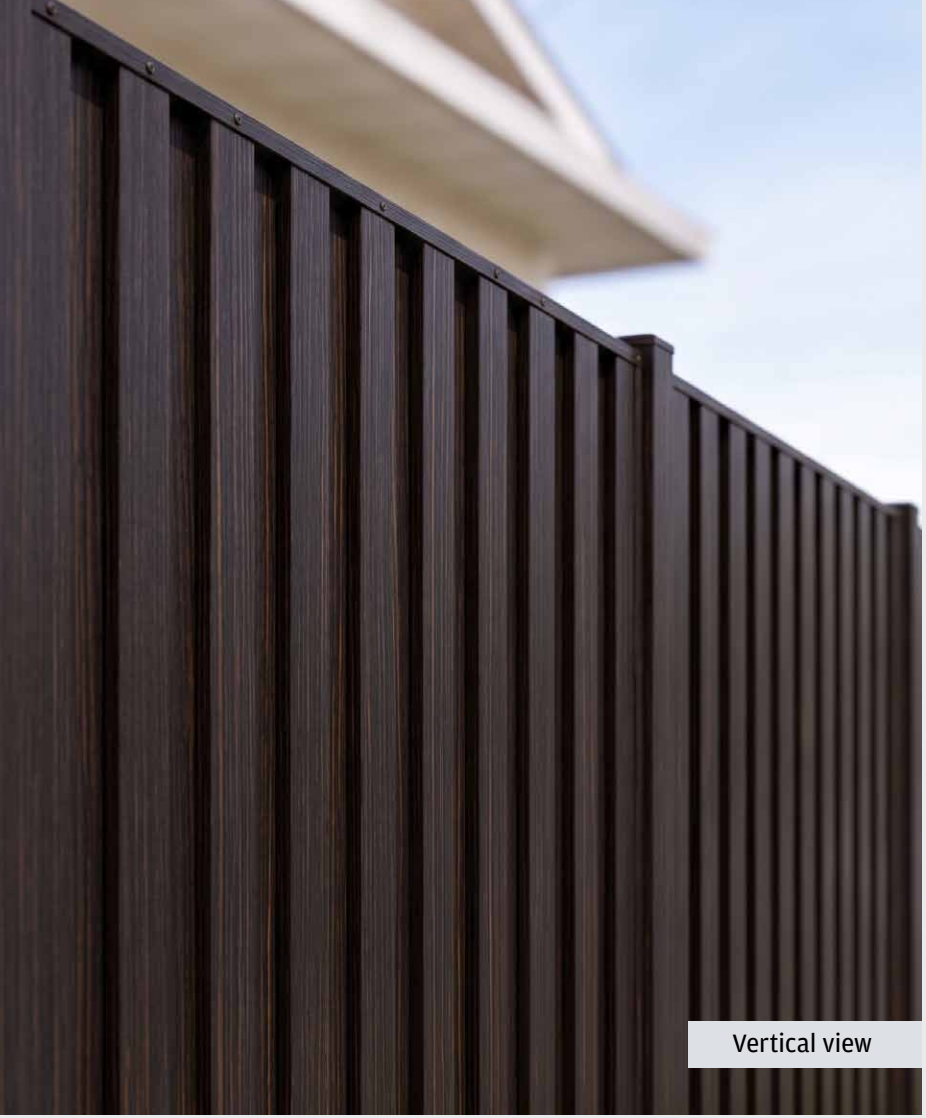

WHY IT GETS SPECIFIED

- Full or partial privacy from a single profile.
- Non-combustible galvanized steel.
- Nothing to sand, stain or repaint.
- Follows the grade, picket by picket. No stepped runs, no custom panels.

SIZES & FINISHES

Privacy level	Full or partial
Heights	3 · 4 · 6 · 7 ft
Picket width	7-11/16" · 7½" coverage
Sloped terrain	Yes, picket by picket
Installation	Screw-included
Collections	Aldera · Senda
Weight per picket	2.53 / 3.37 / 5.04 / 5.88 lb

ALDERA

DOUBLE-SIDED PRIVACY PANEL

Architectural Collection · good-neighbor wood-grain steel

Finished on both sides. Including your neighbor's.

A symmetrical profile with no backside: the same architectural finish on both faces of the property line.

WHY IT GETS SPECIFIED

- Identical premium finish texture on both faces.
- 100% full privacy enclosure.
- Installs vertical or horizontal.
- A matching gate can be built from the same panel.
- Non-combustible galvanized steel, no wood substructure.

SPECIFICATIONS

Privacy level	Full
System type	Good-neighbor fencing
Orientation	Vertical or horizontal
Panel heights	1 · 3 · 4 · 6 · 7 · 8 ft
Panel width	3 ft
Collection	Aldera

The 1 ft wall topper

The 1 ft ALDERA panel is a clean way to finish the top of a masonry wall. It adds privacy and definition while keeping the overall design light and modern.

Because it is part of the same modular fence system, it can also be combined with other ALDERA panel heights to complete a fence run cleanly and consistently.

Nominal 1 ft (10 3/4" actual) · 3 ft wide · finished on both sides · ALDERA

ALDERA
SIDE GATE

Architectural Collection · prefabricated, ready to install

The one part **everybody touches.**

A fence gets looked at. A gate gets handled every day, by everyone, for as long as the property stands. It arrives prefabricated, with a powder-coated frame and the finish already matched to the ALDERA collection fence line, so nothing about it is improvised in the field.

SIZES

Widths	3 ft · 4 ft
Heights	4 · 6 · 7 ft
Frame	Powder-coated steel
Delivery	Prefabricated
Collection	Aldera

OR BUILD THE GATE ON SITE

Both the Picket profile and the Double-Sided Panel can be assembled into a matching gate in the field: same finish, same line, no separate product to order.

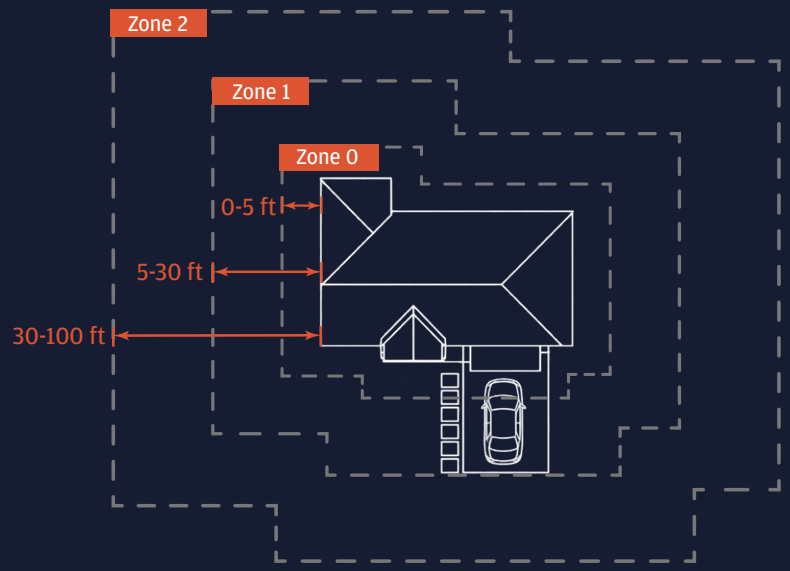

Installation hardware not included. Screws, hinges, locks, latches, pins, and other installation hardware are sold separately.

ZONE ZERO

The first five feet.

California's Zone 0 focuses on the materials closest to the home. For fences and gates, the first five feet are especially important because this is where the fence connects to the structure.

What Zone 0 is

Zone 0 is the area within the first five feet of a home. The goal is to reduce combustible materials that could ignite from embers and help fire reach the structure.

For homeowners and builders, it means paying closer attention to the materials used right next to the house.

Where it applies

Zone 0 is part of California's approach to reducing wildfire risk around homes in fire-prone areas. Requirements and implementation can vary by location, so every project should be reviewed according to the rules of the local jurisdiction.

Three ways Lumenar answers it

- Create a steel transition. Use the ALDERA DOUBLE-SIDED PRIVACY PANEL for the section closest to the home, providing privacy and a cozy, elegant finished appearance on both sides.
- Continue the fence with a coordinated design. Depending on the project, the fence can continue with ALDERA PICKET FENCE or SENDA PICKET FENCE, creating a consistent look throughout the property.
- Complete the access point in steel. Where a gate connects near the home, the ALDERA SIDE GATE provides a durable, noncombustible solution designed to complement the fence system.

What it means for a fence

A fence does not necessarily need to be completely replaced.

When a combustible fence reaches the home, the section closest to the structure can transition to a noncombustible material such as steel. This creates a practical way to address the connection point while maintaining the overall fence design.

Why steel

Steel does not burn, making it a natural choice for areas where reducing combustible materials matters.

Lumenar fence systems combine galvanized steel construction with clean, contemporary designs, giving homeowners and contractors a solution that supports fire-conscious design without making the fence look like an afterthought.

Zone 0 requirements, timelines and local amendments vary by jurisdiction and change over time. Confirm the standard with the authority having jurisdiction before specifying. General information, not a code interpretation.

FINISHES

Wood-inspired architectural finishes.

Not an imitation of wood. The finish is bonded to the steel at the mill, before the panel is ever formed, so it protects the steel and carries the warm, finished colored wood texture at the same time.
